# Security & Access Systems for SME

Security access systems play a crucial role in safeguarding the assets, data and personnel of small and medium-sized enterprises (SMEs). Implementing effective security measures helps protect against unauthorised access, theft, vandalism and other potential risks.

Aurora, in partnership with Verkada, is working to keep SMEs safe. Specialising in cloud-based security systems such as video surveillance and access control, Verkada aims to modernise enterprise physical security.

Access Control Systems

We provide access control solutions that combine cloud-based software with hardware devices like door controllers and readers. This system allows you to manage and control access to different areas of your premises, grant or revoke access privileges and track entry logs. It integrates with Verkada's video surveillance platform, providing a comprehensive security solution.
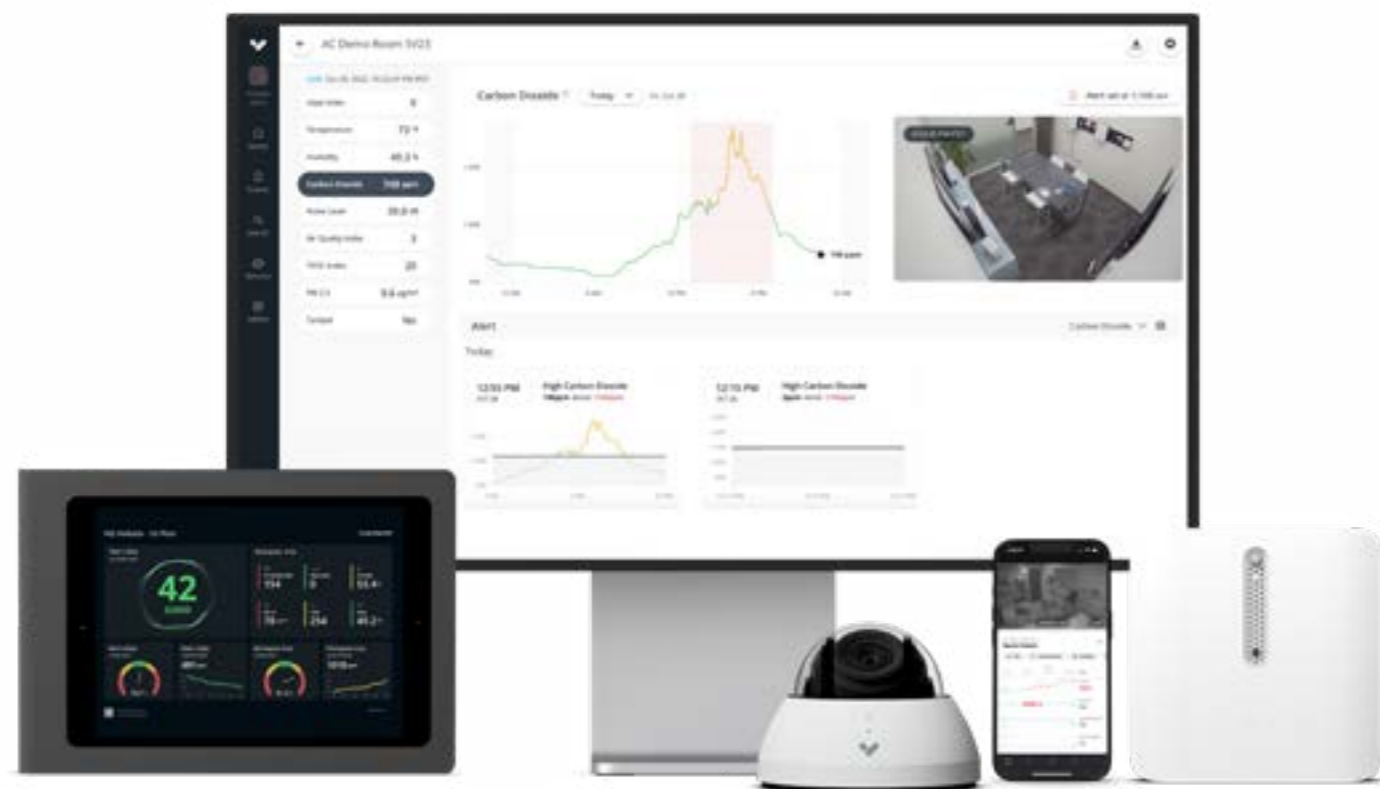

Video Surveillance Systems

You can enjoy cloud-based video surveillance captured in high definition footage that is securely stored in the "Command Platform". The system provides remote access to live video feeds, playback capabilities and advanced features like motion detection and people counting. This solution is scalable and suitable for SMEs with varying security needs.

Intrusion Detection Systems

Verkada's cameras can be configured to detect motion and trigger alerts when unauthorised movement is detected. These alerts can be sent to designated personnel or integrated with external alarm systems for immediate response. The cloud-based nature of these solutions allows for real-time monitoring and incident resolution.

Alarm Systems

Verkada products can integrate with third-party alarm systems to provide comprehensive security coverage. By combining their cameras and access control solution with alarm systems, SMEs can create a unified security ecosystem that triggers alarms and notifications in case of security breaches or emergencies.

Network Security

All centered around the cloud-based security portal "Command Platform" robust encryption and security measures are employed to protect data transmission and storage. They follow industry best practices to ensure the integrity and confidentiality of customer data. Our tip is that SMEs should also implement network security measures, such as firewalls, antivirus software and regular security updates to protect their network infrastructure.

Visitor Management Systems

While Verkada primarily focuses on video surveillance and access control, they can integrate with third-party visitor management systems. We recommend combining Verkada's access control solution with visitor management systems, SMEs can effectively manage and track visitors' access to their premises.

Data Backup & Recovery

Verkada's cloud-based storage ensures that video footage is securely stored and accessible even in the event of hardware failures or disasters. Aurora recommends implementing additional backup solutions to protect other critical data, like business documents and customer information.

Protect your enterprise and take proactive steps to secure your network infrastructure and effectively manage visitor access. With Verkada's reliable cloud storage and Aurora's recommendations for data backup, ensure the safety of your critical information. Enhance your security measures today and fortify your SME against potential risks. Contact Aurora and start building a comprehensive security solution tailored to your business needs.
